CANAXESS

Web Accessibility Information Card

Accessible NDIS websites

1. Can people follow your videos without sound?

Captions help people who are deaf or hard of hearing follow your videos. They also help anyone watching in a noisy place, somewhere they need to keep the volume down, or simply with the sound switched off

2. Can people make the page larger and still use it?

Some people need larger text to read your website comfortably. Try using the zoom setting in your browser's menu to enlarge the page to 200% and see how it responds

3. Can people move around without a mouse?

Some people navigate websites using a keyboard instead of a mouse. To try this yourself, put your mouse aside and press Tab to move between links, buttons and form fields. Use **Shift** + **Tab** to move backwards, and **Enter** to follow a link or activate a button

4. Can people complete your enquiry form?

People should be able to understand what information your enquiry form needs. Give each field a clear label, such as **Your name** or **Email address**, and connect the label to its field in the code.

This helps people using screen readers understand what to enter.
